

Ilustracion del proyecto en proteus (PARA PROBAR I2C CON EL RTC):

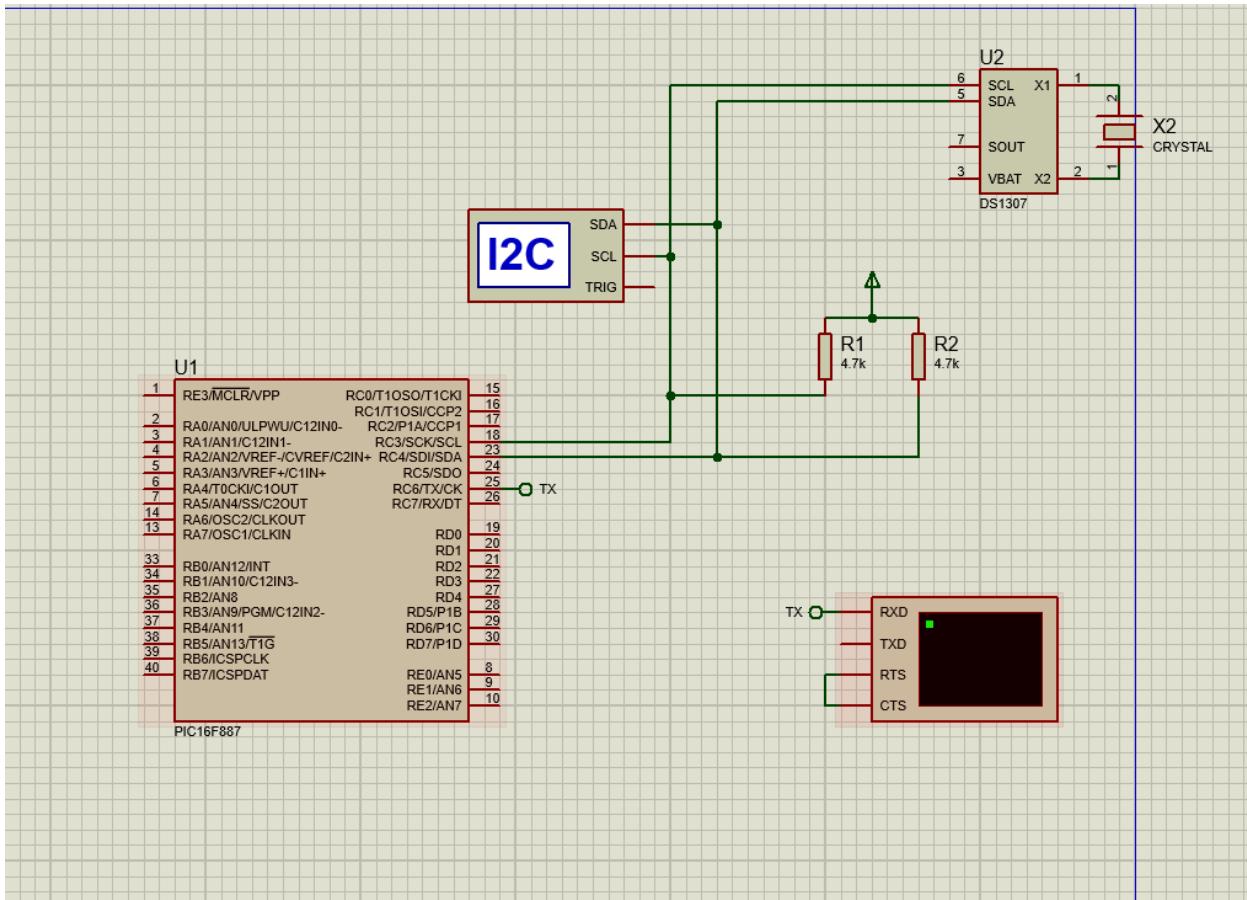

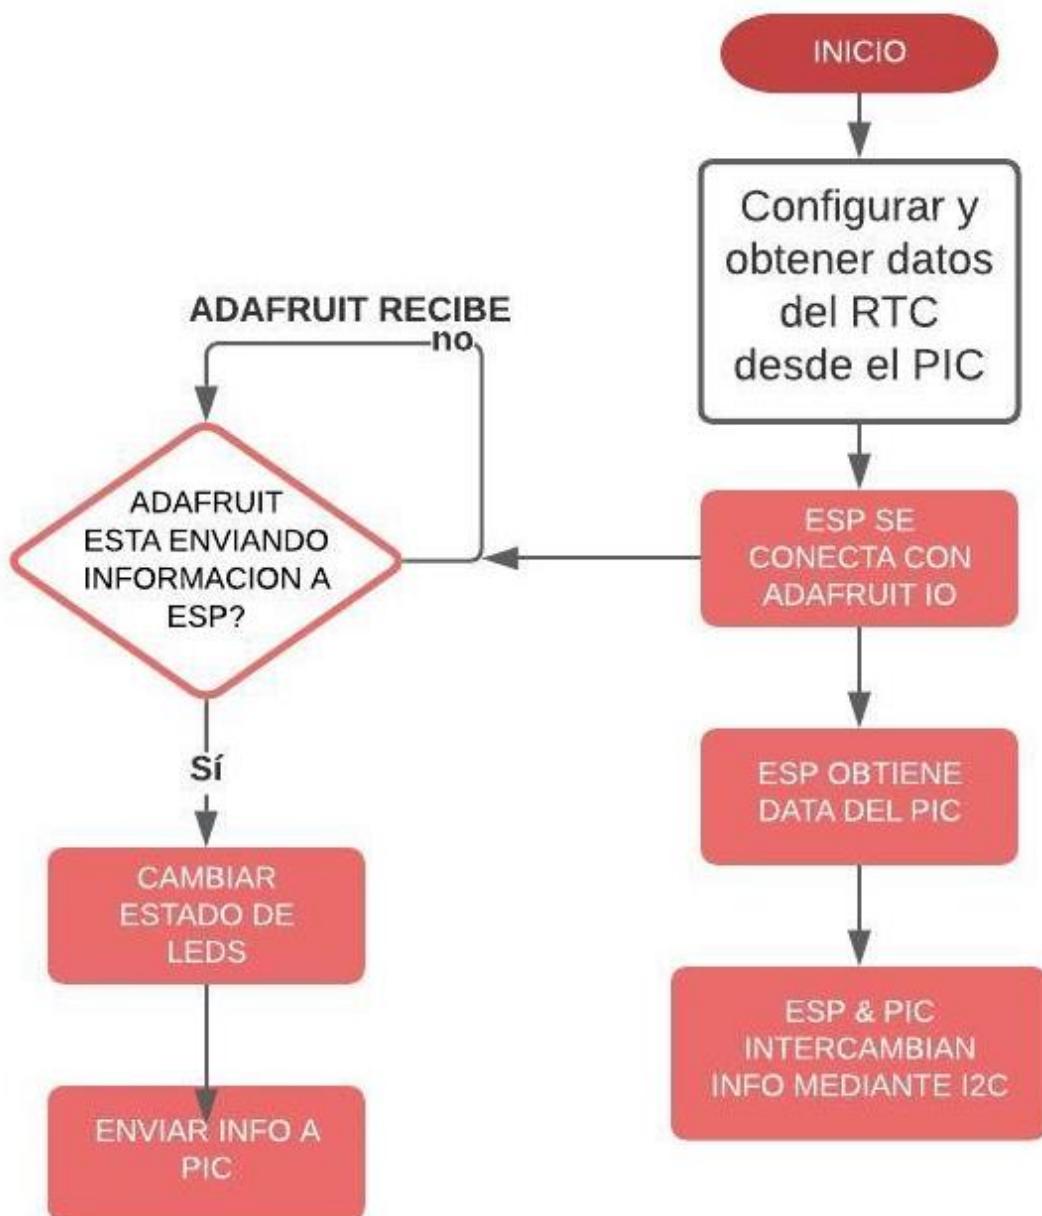

Diagrama de flujo:

Pseudocódigo Master:

```
PORTA = 0;  
PORTC = 0;  
PORTD = 0;  
ANSEL = 0;  
ANSELH = 0;  
  
*GIE & PEIE enable  
  
* habilitar comunicacion I2C;  
  
// MAIN-----  
  
void main(void) {  
    setup();  
    RTC Init();  
    while (1) {  
        if (TXSTAbits.TRMT == 1) {  
            SendString("hora :");  
            aski = ascii(hrora);  
            ready(aski);  
  
            SendString("minutos :");  
            aski = ascii(minutos);  
            ready(aski);  
  
            SendString("segundos :");  
            aski = ascii(segundos);  
            ready(aski);  
        }  
  
        void ready(char val) {  
            while (!TXIF);
```

```
    TXREG = val;
```

```
}
```

Pseudocodigo ESP32:

```
int count = 0;
```

```
uint8_t hora;
```

```
#define IO_LOOP_DELAY 5000
```

```
unsigned long lastUpdate = 0;
```

```
// set up de los feeds feed
```

```
AdafruitIO_Feed *your_feed = io.feed("your_feed"); //esto por los leds y el sensor
```

```
void setup() {
```

```
    Serial.begin(115200);
```

```
    Serial2.begin(9600);
```

```
}
```

```
void loop() {
```

```
    io.run();
```

```
    **select de los leds**
```

```
    if cont == 0;
```

```
        led1 = 0;
```

```
        led2 = 0;
```

```
    if cont == 1;
```

```
        led1 = 1;
```

```
        led2 = 0;
```

```
if cont == 2;  
led1 = 0;  
led2 = 1;  
  
if cont == 3;  
led1 = 1;  
led2 = 1;  
  
**implementar rutina para enviar hora**  
Serial.println(hora);  
}
```
